

Lesson 56: String Methods and Properties #2 (W19D2)

Balboa High School

Michael Ferraro

January 5, 2016

In a new project, Lesson56, create class OddCharacters.

- 1 Write method `oddChars()` that takes a `String` as a parameter and returns a `String` having only the “odd” characters (i.e., the first, third, fifth, ... characters).

For example:

```
String odds = oddChars("AaBbCcDd");  
// odds = "ABCD"
```

- 2 Have `main()` call `oddChars()` with the `Strings` below, printing the results.
 - 1 snack
 - 2 sparkles

Students will continue learning about the properties of `Strings` in Java and work on related programming problems.

String Methods: substring()

- `substring()` returns part of a `String`

String Methods: substring()

- `substring()` returns part of a `String`
- `substring()` is an *overloaded* method

String Methods: substring()

- `substring()` returns part of a `String`
- `substring()` is an *overloaded* method
 - `substring(fromPos)`: returns all characters starting from the specified position

String Methods: substring()

- `substring()` returns part of a `String`
- `substring()` is an *overloaded* method
 - `substring(fromPos)`: returns all characters starting from the specified position

Ex:

A	B	C	D	E	F
0	1	2	3	4	5

String Methods: substring()

- `substring()` returns part of a `String`
- `substring()` is an *overloaded* method
 - `substring(fromPos)`: returns all characters starting from the specified position

Ex:

A	B	C	D	E	F
0	1	2	3	4	5

```
System.out.println( "ABCDEF".substring(3) );
```

String Methods: substring()

- `substring()` returns part of a `String`
- `substring()` is an *overloaded* method
 - `substring(fromPos)`: returns all characters starting from the specified position

Ex:

A	B	C	D	E	F
0	1	2	3	4	5

```
System.out.println( "ABCDEF".substring(3) ); ← DEF
```

String Methods: substring()

- `substring()` returns part of a `String`
- `substring()` is an *overloaded* method
 - `substring(fromPos)`: returns all characters starting from the specified position

Ex:

A	B	C	D	E	F
0	1	2	3	4	5

```
System.out.println( "ABCDEF".substring(3) ); ← DEF
```

```
System.out.println( "ABCDEF".substring(0) );
```

String Methods: substring()

- `substring()` returns part of a `String`
- `substring()` is an *overloaded* method
 - `substring(fromPos)`: returns all characters starting from the specified position

Ex:

A	B	C	D	E	F
0	1	2	3	4	5

```
System.out.println( "ABCDEF".substring(3) ); ← DEF
```

```
System.out.println( "ABCDEF".substring(0) ); ← ABCDEF
```

String Methods: substring()

- `substring()` returns part of a `String`
- `substring()` is an *overloaded* method
 - `substring(fromPos, toPos)`: returns characters starting from `fromPos` and ending **before** `toPos`

String Methods: substring()

- `substring()` returns part of a `String`
- `substring()` is an *overloaded* method
 - `substring(fromPos, toPos)`: returns characters starting from `fromPos` and ending **before** `toPos`

Ex:

A	B	C	D	E	F
0	1	2	3	4	5

String Methods: substring()

- `substring()` returns part of a `String`
- `substring()` is an *overloaded* method
 - `substring(fromPos, toPos)`: returns characters starting from `fromPos` and ending **before** `toPos`

Ex:

A	B	C	D	E	F
0	1	2	3	4	5

```
System.out.println( "ABCDEF".substring(1,4) );
```

String Methods: substring()

- `substring()` returns part of a `String`
- `substring()` is an *overloaded* method
 - `substring(fromPos, toPos)`: returns characters starting from `fromPos` and ending **before** `toPos`

Ex:

A	B	C	D	E	F
0	1	2	3	4	5

```
System.out.println( "ABCDEF".substring(1,4) ); ← BCD
```

String Methods: substring()

- `substring()` returns part of a `String`
- `substring()` is an *overloaded* method
 - `substring(fromPos, toPos)`: returns characters starting from `fromPos` and ending **before** `toPos`

Ex:

A	B	C	D	E	F
0	1	2	3	4	5

```
System.out.println( "ABCDEF".substring(1,4) ); ← BCD
```

```
System.out.println( "ABCDEF".substring(4,5) );
```

String Methods: substring()

- `substring()` returns part of a `String`
- `substring()` is an *overloaded* method
 - `substring(fromPos, toPos)`: returns characters starting from `fromPos` and ending **before** `toPos`

Ex:

A	B	C	D	E	F
0	1	2	3	4	5

```
System.out.println( "ABCDEF".substring(1,4) ); ← BCD
```

```
System.out.println( "ABCDEF".substring(4,5) ); ← E
```

String Methods: substring()

- `substring()` returns part of a `String`
- `substring()` is an *overloaded* method
 - `substring(fromPos, toPos)`: returns characters starting from `fromPos` and ending **before** `toPos`

Ex:

A	B	C	D	E	F
0	1	2	3	4	5

```
System.out.println( "ABCDEF".substring(1,4) ); ← BCD
```

```
System.out.println( "ABCDEF".substring(4,5) ); ← E
```

```
System.out.println( "ABCDEF".charAt(4) );
```

String Methods: substring()

- `substring()` returns part of a `String`
- `substring()` is an *overloaded* method
 - `substring(fromPos, toPos)`: returns characters starting from `fromPos` and ending **before** `toPos`

Ex:

A	B	C	D	E	F
0	1	2	3	4	5

```
System.out.println( "ABCDEF".substring(1,4) ); ← BCD
```

```
System.out.println( "ABCDEF".substring(4,5) ); ← E
```

```
System.out.println( "ABCDEF".charAt(4) ); ← E
```

String Methods: substring()

Build a class to test the following on fun.

```
String fun = "I like chicken!"
```

- `substring(0);`
- `substring(2);`
- `substring(6, 11);`
- `substring(6, 11).trim();`
- `substring(10, 11);`
- `substring(10, 10);`
- `substring(5, fun.length());`

I		I	i	k	e		c	h	i	c	k	e	n	!
0	1	2	3	4	5	6	7	8	9	10	11	12	13	14

PS #10: §4, Book Questions #1

Once you have an understanding of how the methods work for class `String` — including ones we didn't cover in class, like `indexOf()` — begin working on §4 of PS #10.

- You can find the referenced problems [here](#).
- Getting stuck? There's a video that gives you strategies you can use on these problems! Take out headphones and see [here](#)¹. Make sure you're in full-screen mode at 720p (HD) quality.

¹The video refers to Litvin Ch. 10, which corresponds to the older edition of the textbook. The problems are now in Ch. 8.

Complete PS #10, §§1-4, inclusive.
